Visualising the user to user Internet with RIPE Atlas

Michela Galante

Peering Forum LACNIC 29 | 30 April 2018

User to User is Still Important

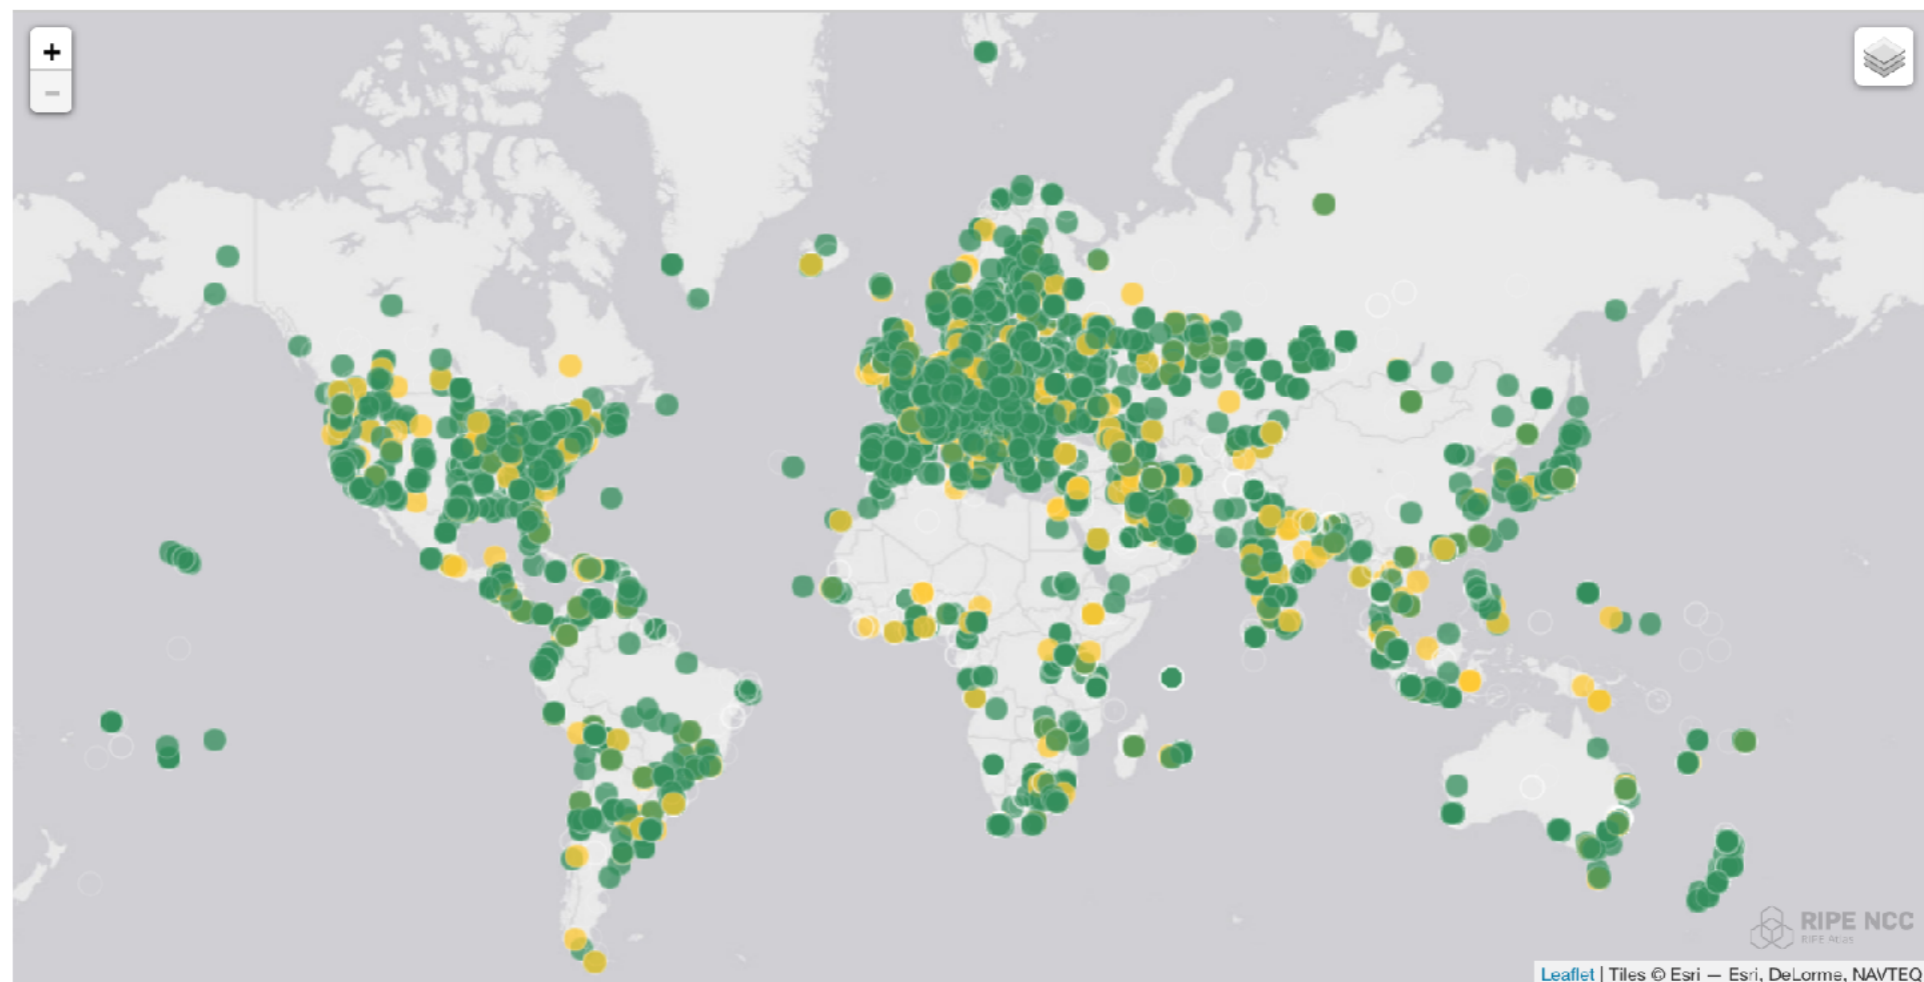

- Traffic is mostly optimised for big content providers.
- But who is in the middle of user-to-user communications?
 - Any “single point of failure”?
 - How much IXPs and Transit Providers are involved?
- Can we estimate how many users are represented by the various player involved?

Ingredient (A): RIPE Atlas

- Measure the Internet!
 - By the community, for the community
- It's on Wikipedia: https://en.wikipedia.org/wiki/RIPE_Atlas

Ingredient (A): RIPE Atlas

10,400+ probes connected (310+ Anchors)

6000 results collected per second

40,000+ user-defined measurements weekly

Five types of user-defined measurements available to probe hosts and RIPE NCC members: ping, traceroute, DNS, SSL, NTP, HTTP, WiFi

Ingredients (B) + (C)

- (B) User population estimates (APNIC data)
 - measurement-based rough estimate
 - <https://stats.labs.apnic.net/aspop/>
- (C) IXP-country-jedi
 - <https://www.ripe.net/ixp-country-jedi/>
 - mesh traceroutes between RIPE Atlas probes in a country
 - measures and analyses (using OpenIPmap)
- Many caveats: Results are ‘sketches’

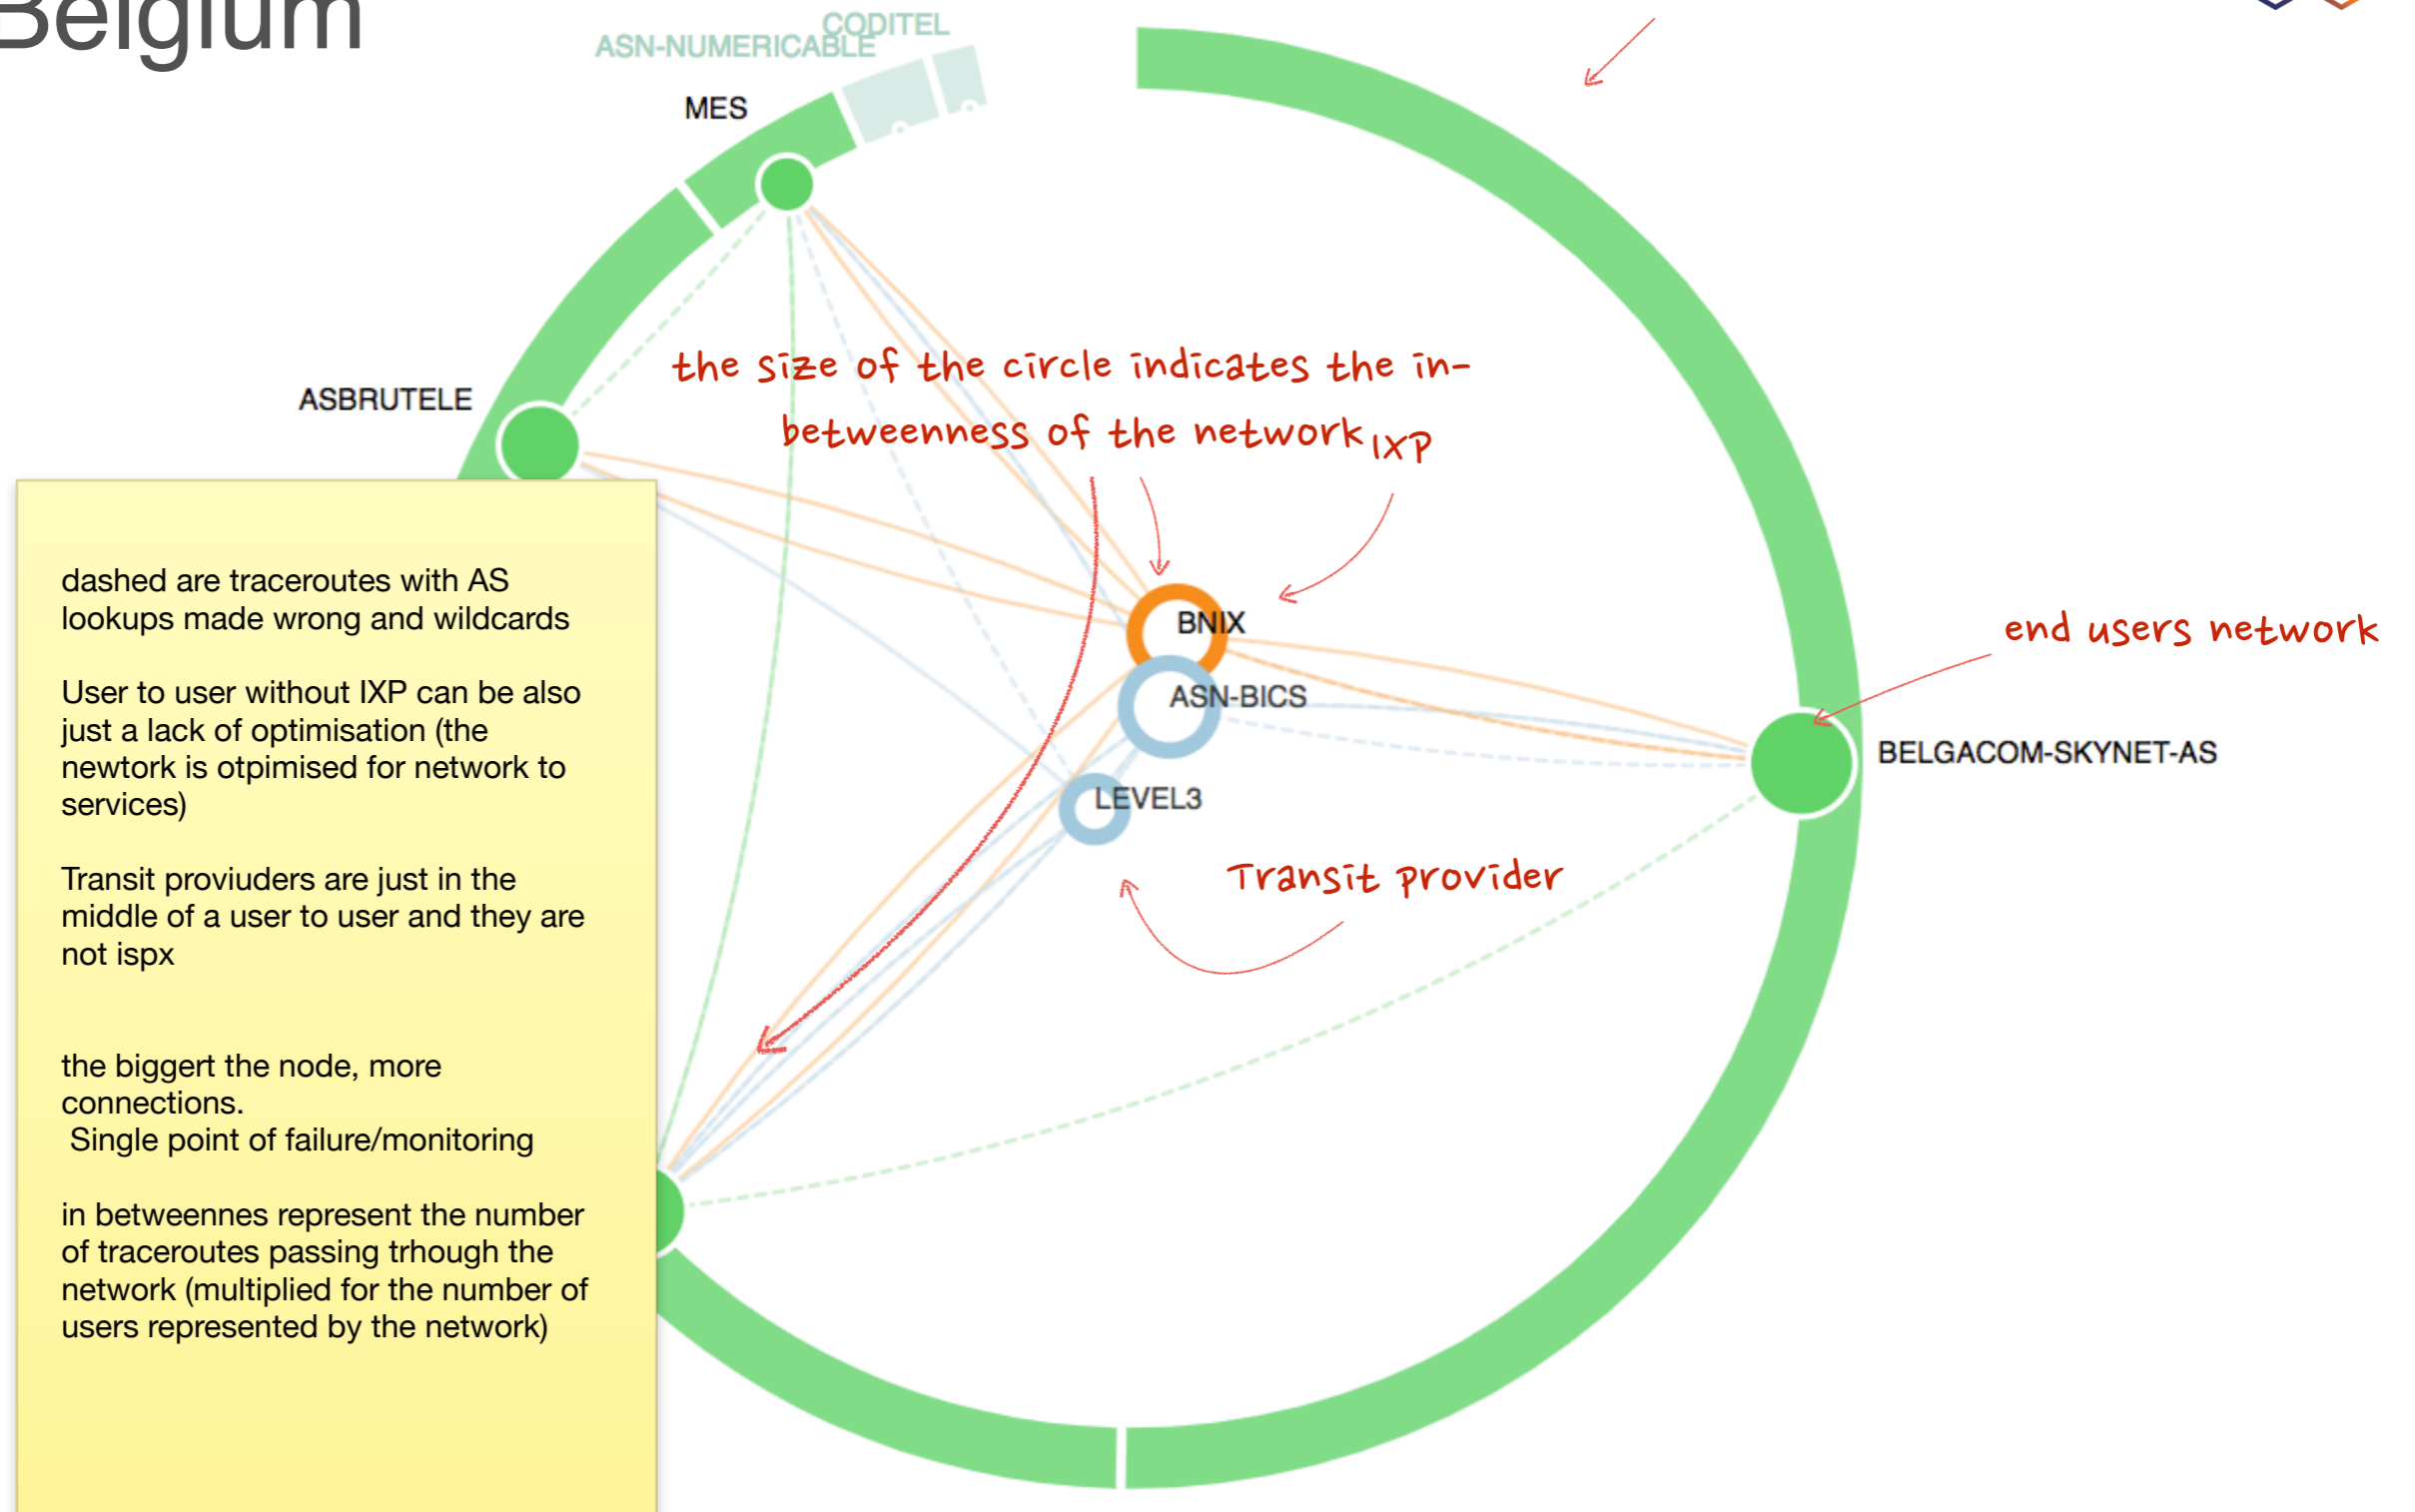

population per network(ASN)

we consider only network that have at least 1% of the population

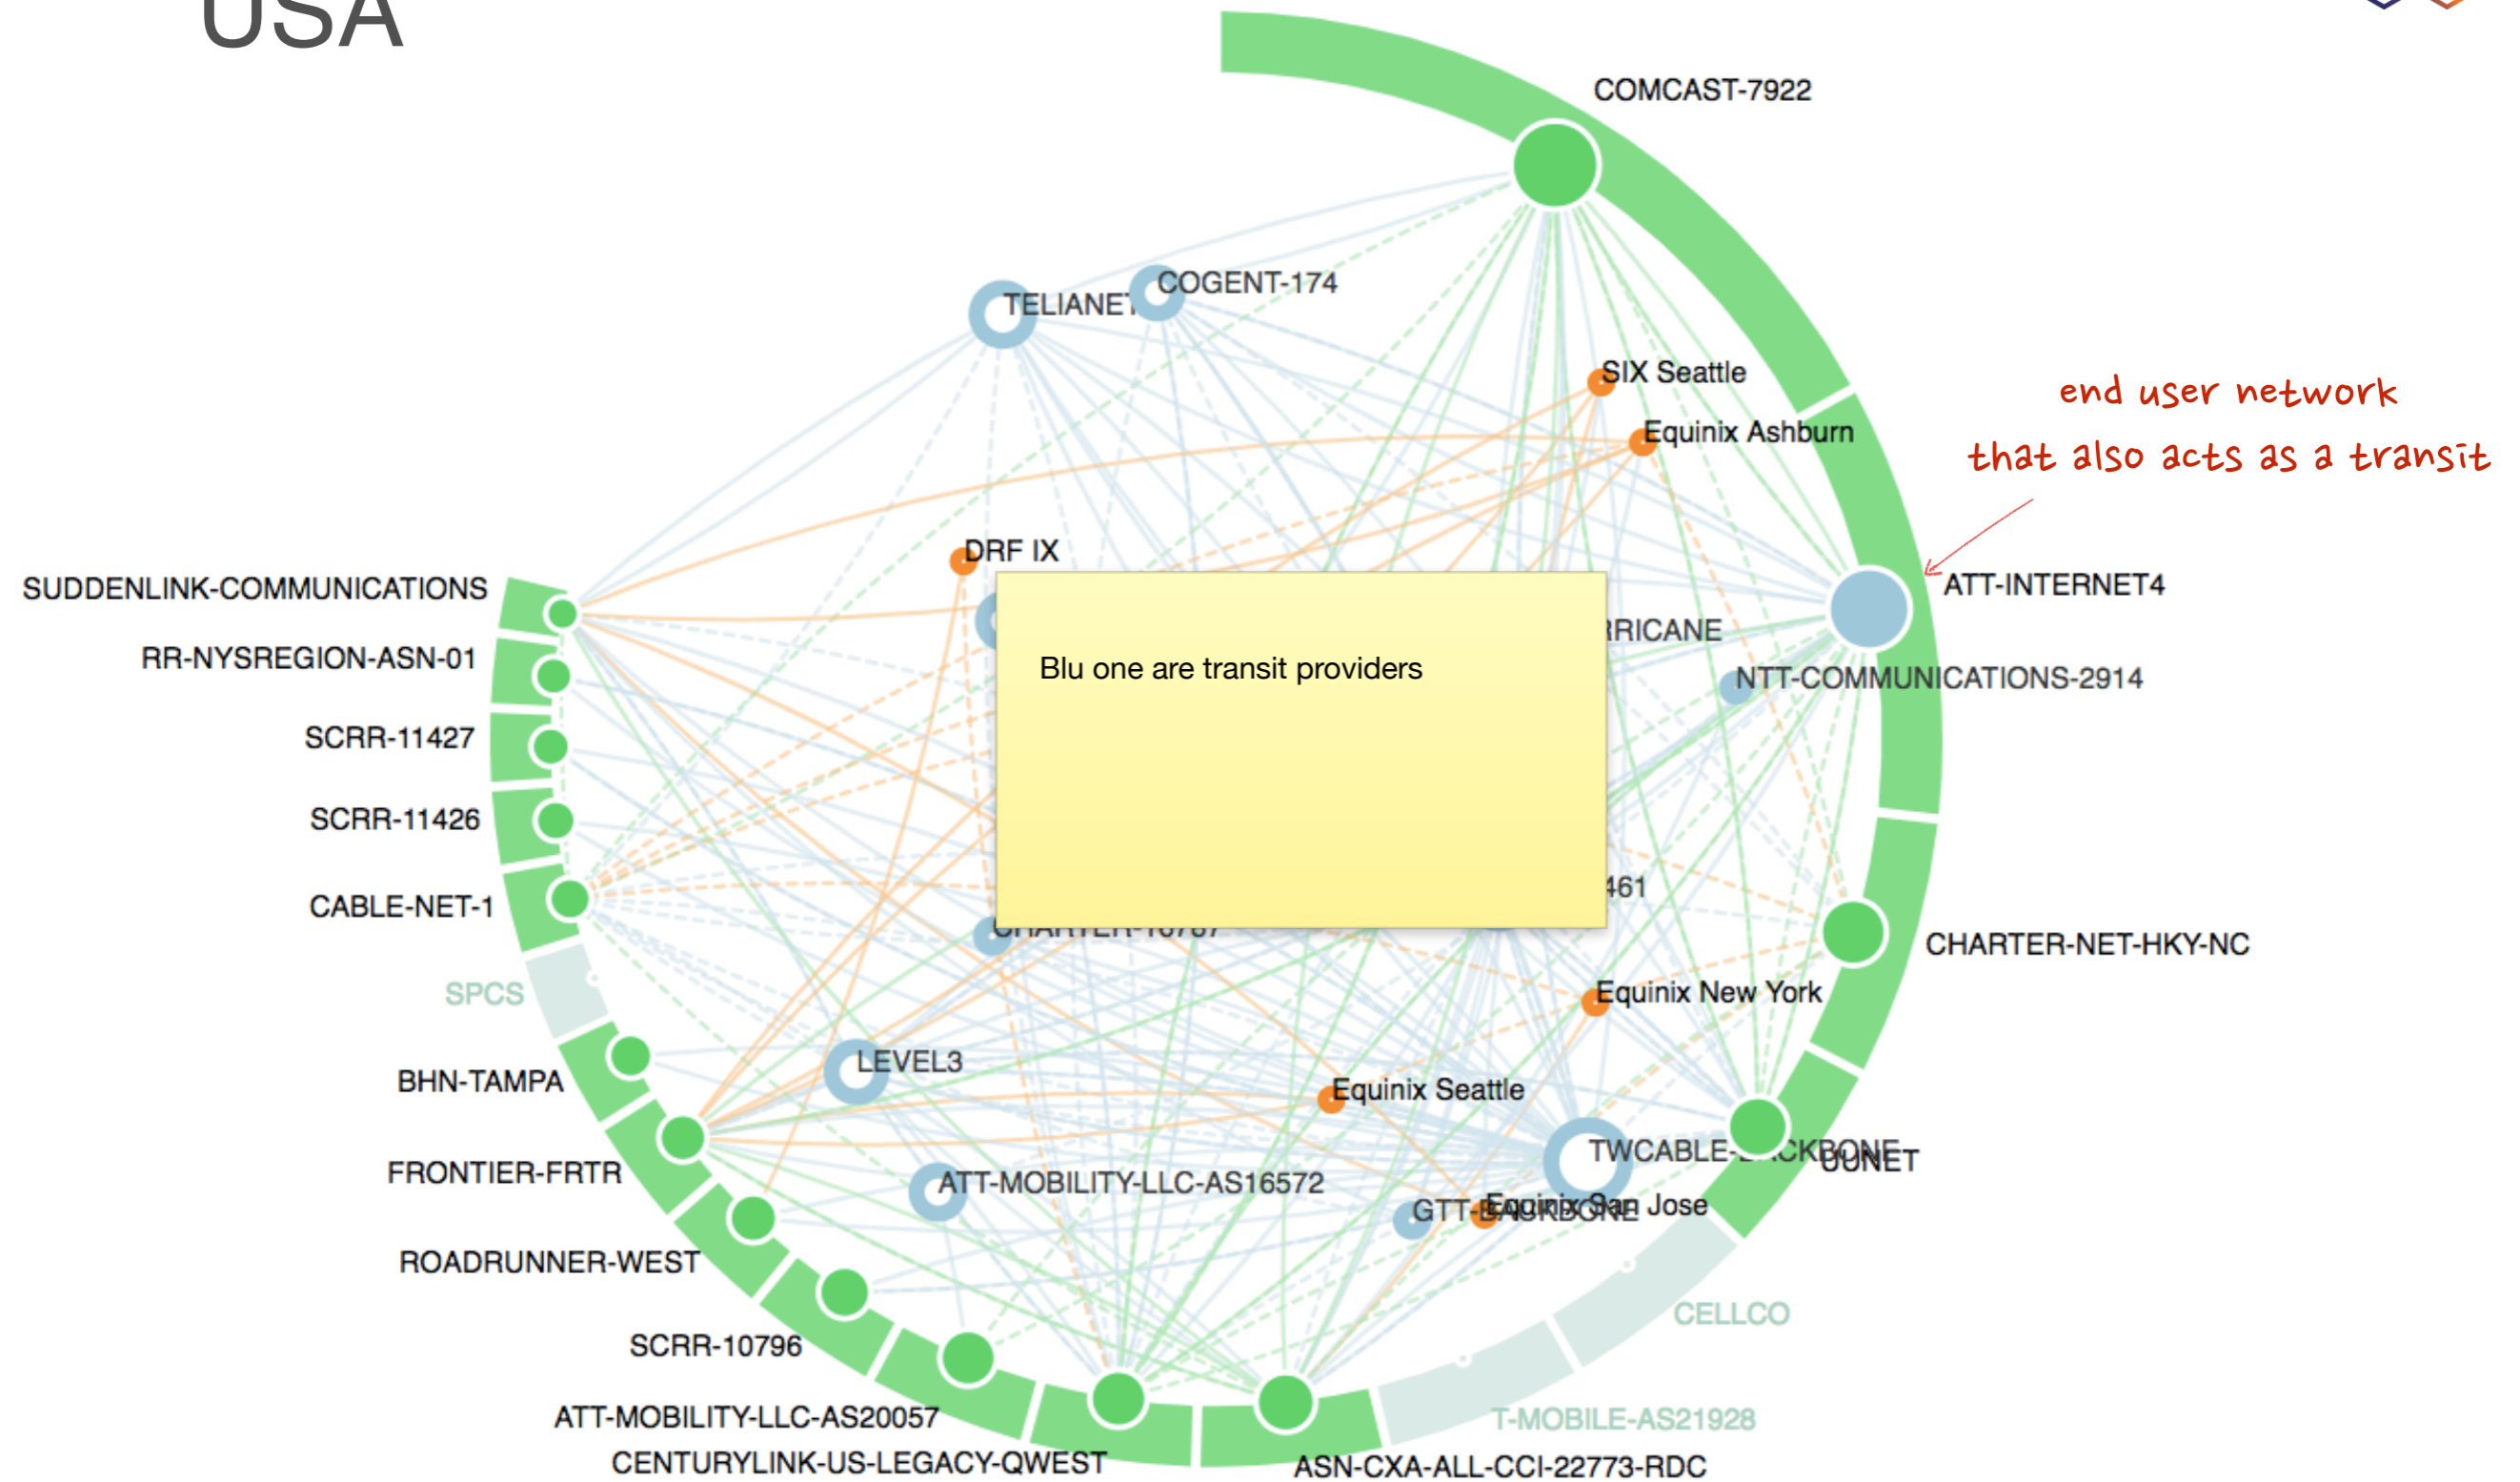

Show me the Data!

Belgium

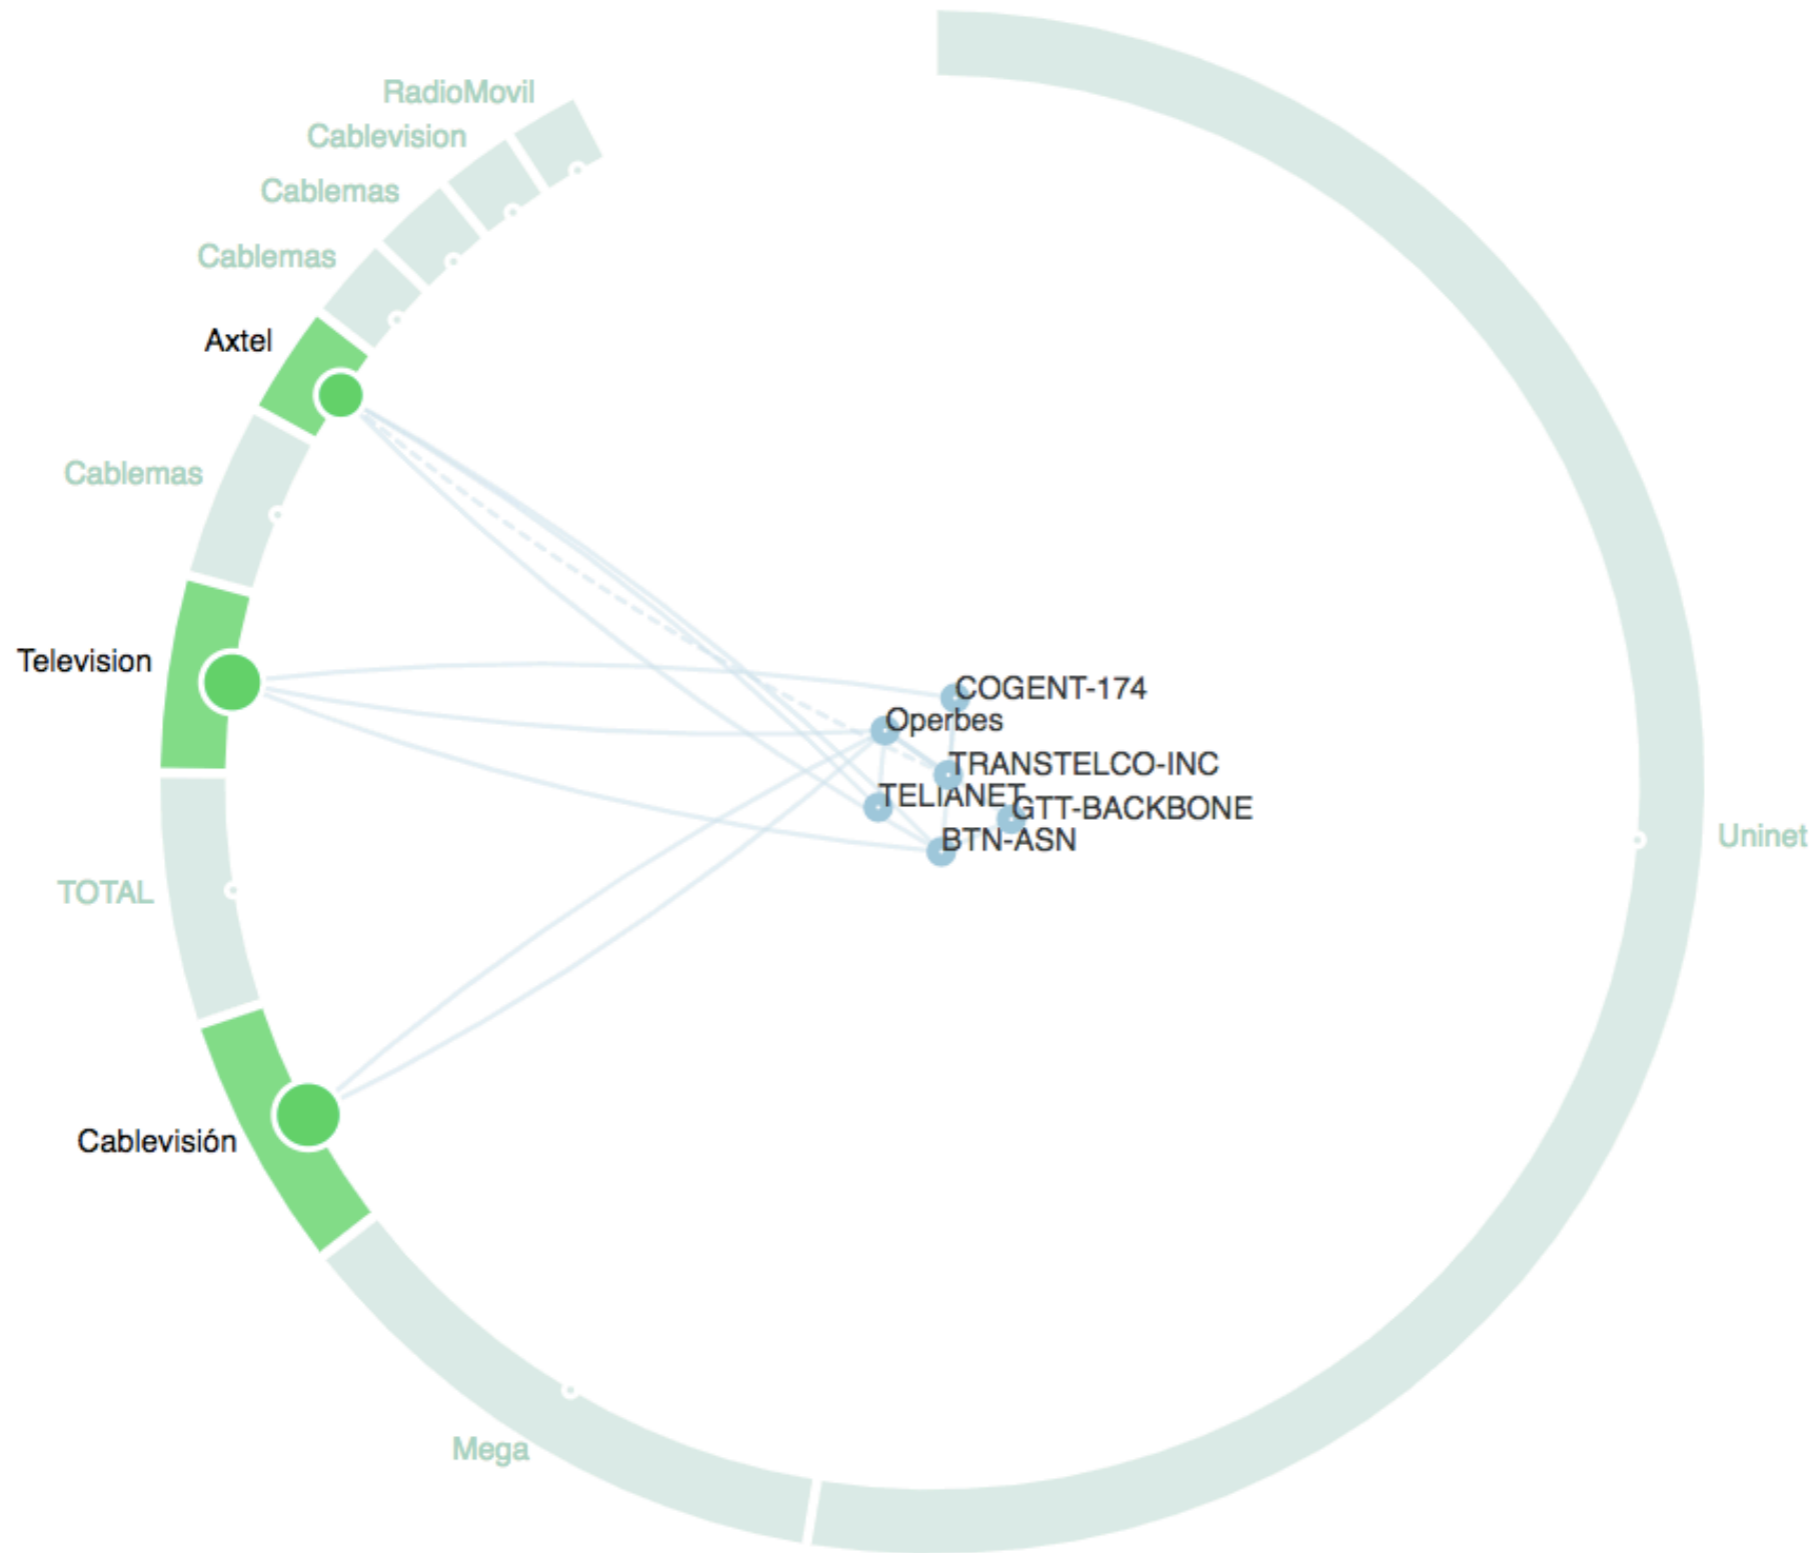

USA

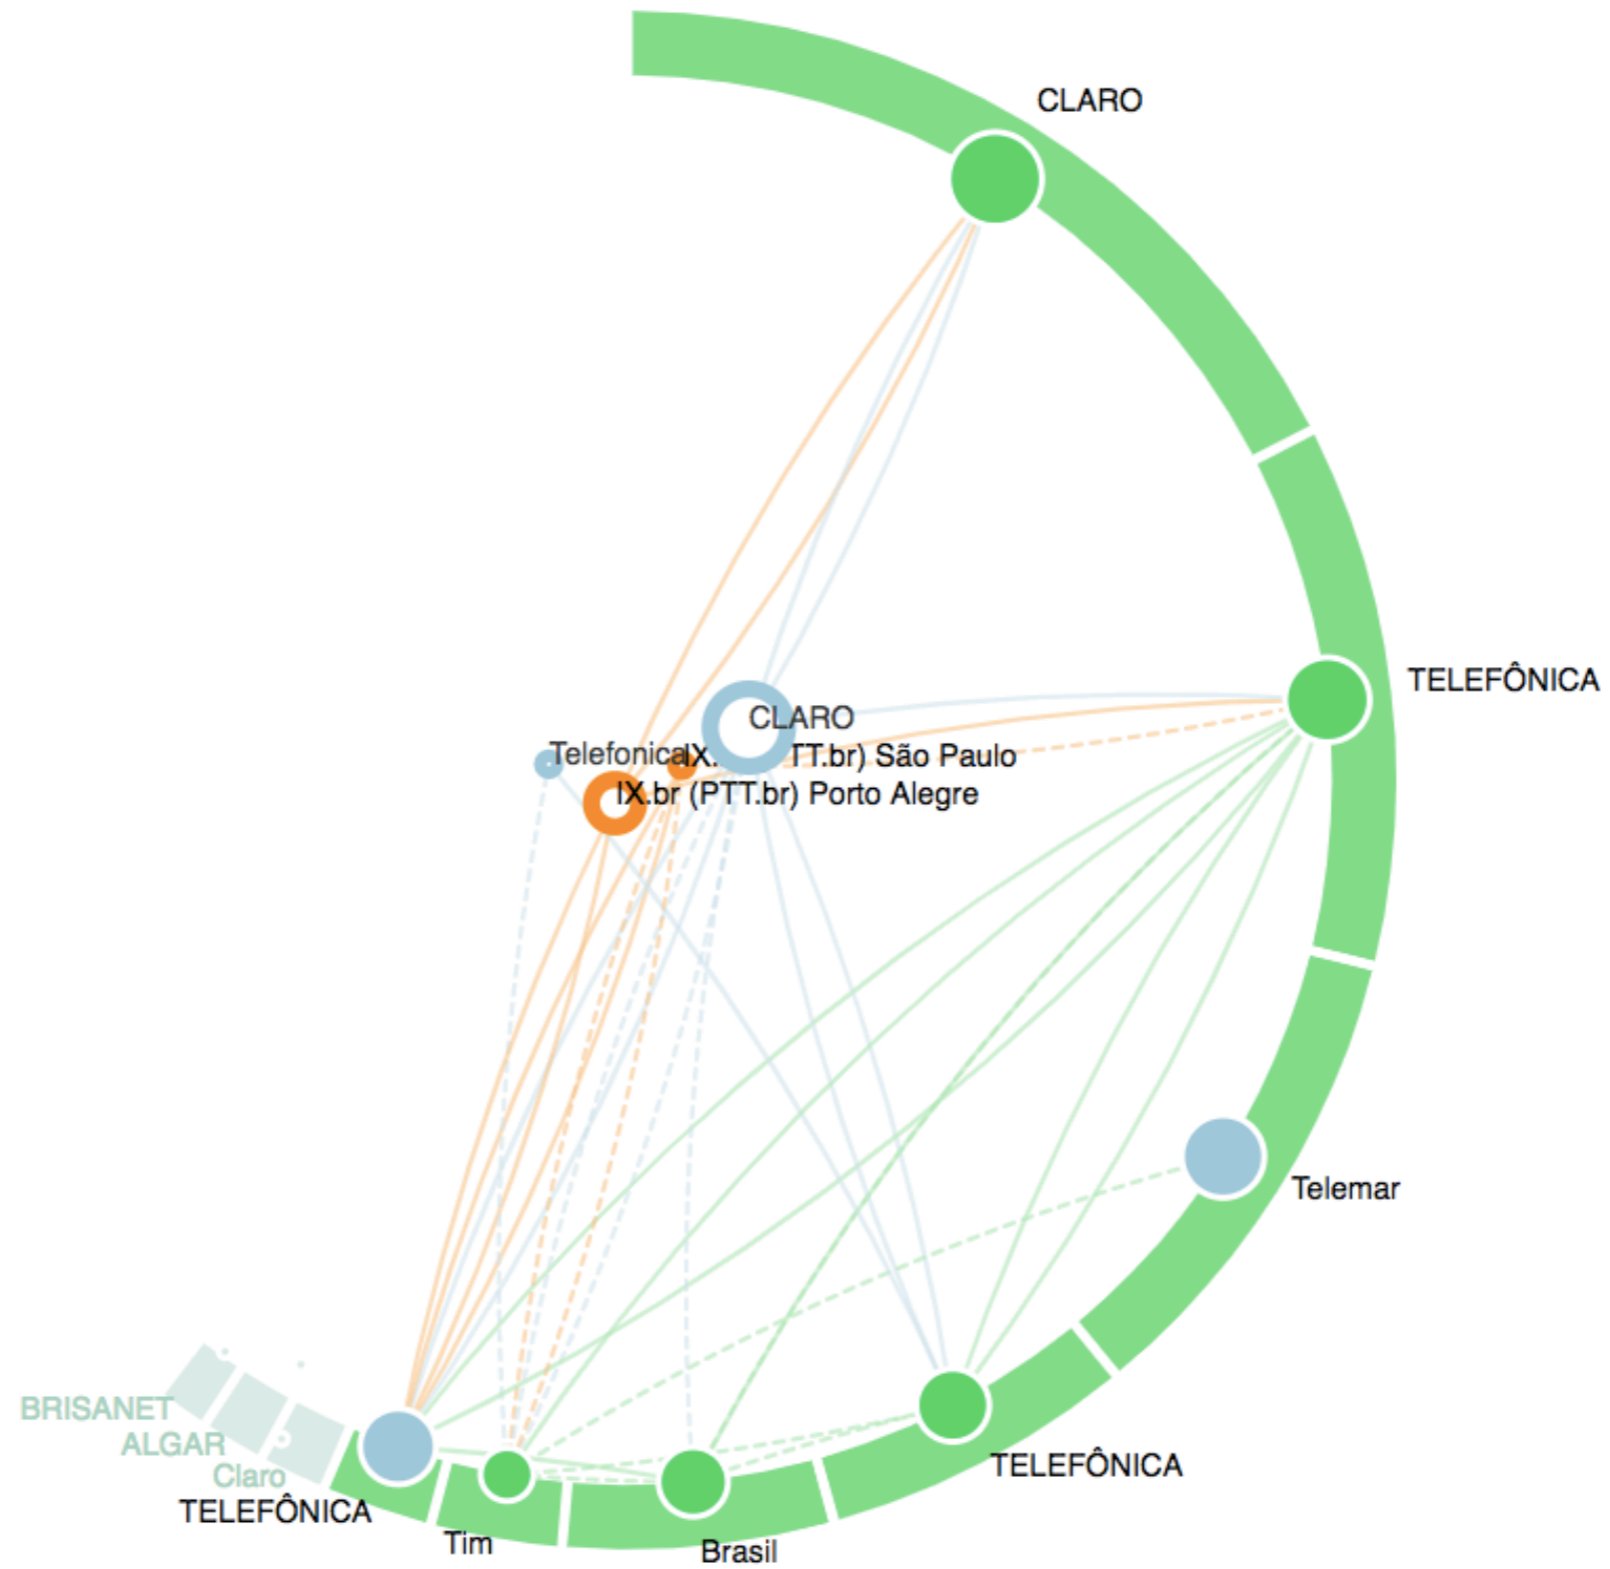

Mexico

Brazil

RIPE NCC
RIPE NETWORK COORDINATION CENTRE

Can we measure how
(de)centralised Internet
is with RIPE Atlas?

**Yes! We can create sketches of
what infrastructure is between
users**
