PROPOSAL DATA:

Policy Proposal Title: Inclusion of ASN in the whois when available

Policy Proposal Type: LACNIC

ID (if exists): LAC-2010-03

Version: 2

Policy Summary:

Inclusion of ASN of origin (provided that it is available) in the information of WHOIS of all the LACNIC's received prefixes.

Rationale:

The proposal is aimed to help to identify the origin of the prefixes, informing the possession of the same. It is a complement to the RPKI resource, but it is more like a security resource.

Proposal Text:

In order to add information of our region to support projects such as Simon and other similar ones, I suggest the compulsory inclusion of ASN of origin in the information of whois of all the LACNIC's received prefixes. If the information is not specified, the response of WHOIS must indicate that fact.

This will be a complement to the RPKI certificates project. For the prefixes without licenses, at least the ASN of origin will be announced in the whois. This will not only help in the tools, but also in the verifications of prefixes' properties.
