# It Supports IPv6

*Tomás Lynch*  
*Solutions Architect III*  
*Ericsson*

# Does it support IPv6?

Does your equipment support IPv6?

Yes, of course!

We'll send you the RFP, thanks.

## Company A RFP for IP Backbone Network

---

### Objective of the RFP

Company A is a leader in telecommunications and wants to update its IP Backbone Network with some routers. Indicate your answers in the RFP with “Compliant”, “Partially Compliant” or “Not Compliant”.

### RFP Questions

[After a few questions of line cards, chassis, redundancy, etc]

23) Does it support IPv6?

[More questions about QoS, Multicast and SNMPv3]

## Company B RFP for IP Backbone Network

---

### Objective of the RFP

Company B is the Big Brother in telecommunications and wants to update its IP Backbone Network with some routers. Indicate your answers in the RFP with “Compliant”, “Partially Compliant” or “Not Compliant” taking into account that we like to ask a lot of questions.

### RFP Questions

[After thousands of questions of line cards, chassis, redundancy, X.25 and support for AppleTalk]

13092) Does it support IPv6 in dark rooms?

13093) Does it support IPv6 when the light is on?

13094) Does it support IPv6 in the morning with the light off?

13095) Does it support IPv6 encapsulated in IPv6 for transport over Avian Carriers?

13096) Does it support Scenic Routing for IPv6 packets?

13097) Please declassified your patents and tell us if you support RFC1 to RFC8000 including expired drafts.

[More questions about QoS, Multicast, SNMP, dwarf stars and cosmic voyages into the infinitum]

# Requirements for IPv6 in ICT Equipment

- [RIPE-554](#)
- “It can serve as a template that can be used by governments, large enterprises and all other organisations when seeking IPv6 support in their tenders or equipment requirements and offer guidance on what specifications to ask for.”
- Publication date: 04 Jun 2012
- Jan Žorž, primary co-author, is here in LACNOG2015.
  - “Always happy to help community with this stuff ;)”

# RIPE-554 Highlights

- How to specify requirements
- Proposed generic text for the tender initiator
- Lists of mandatory and optional RFC/3GPP technical specifications
  - Two categories, “mandatory” and “optional”
  - Seven functional groups: Host, Layer 2 switch, Router or Layer 3 switch, Network security equipment, CPE, Mobile device and Load balancer.
- Skill requirements of the systems integrator
  - Declaration of IPv6 competence

# IPv6 Node Requirements

- [RFC6434](#)
- “This document defines a minimal level of requirement needed for a device to provide useful internet service and considers a broad range of device types and deployment scenarios.”
- Publication date: December 2011

# RFC6434 Highlights

- Defines common functionality required from both IPv6 hosts and routers.
- Includes chapters for
  - Sub-IP Layers
  - IP Layer
  - DNS & DHCP
  - Transition mechanisms
  - Application Support
  - Mobility
  - Security
  - SNMP

# It Supports IPv6

- “...a simple check-box in an RFX isn’t enough.”
- “What you need ‘IPv6 support’ to mean is full feature parity with your existing [...] products and services.”
- “Once you find a product or service that meets your needs on paper, lab testing and limited launches [...] will help ensure that you aren’t bitten by this myth.”

<http://www.internetsociety.org/deploy360/blog/2015/03/ipv6-security-myth-8-it-supports-ipv6/> by Chris Grundemann.

But ..

# IPv6 is not for an isolated device only

- Not only routers, switches, firewalls, etc.
- Other Systems are Affected:
  - Network management systems
  - Service delivery
  - Service fulfillment, including the network inventory, activation and provisioning
  - Service assurance
  - Customer care

# Managing IPv4 Addresses – An Example

# Operational Considerations for IPv6

- Operational process
- Training
- OSS/BSS
- DCN

Any function, process, OSS or BSS that utilizes IP addresses are potentially impacted by IPv6 and needs to get operational support for IPv6 in place prior to deployment to ensure smooth rollout and ramp up.

# IPv6 Operations Potential Process Impacts

## Fulfillment

- Service Configuration and Activation
- Resource Provisioning
- Inventory & Allocation to Service Instance (e.g., IP Address Management)

## Assurance

- Service Problem Mgt.
- Service Quality Analysis Action & Reporting
- Fault, Root Cause Analysis
- Resource Data Collection, Analysis & Control

## Billing & Revenue Management

- Charging
- Service Guiding and Mediation
- Resource Mediation and Reporting

- › Understand impact of IPv6 on key functions to ensure support and update process changes
- › Understand need to operate both IPv4 and IPv6 for different devices and in different parts of network
- › Configuration, diagnostic testing

# Conclusions

- Analyze what you need from IPv6 in your network
- Follow guidelines to write RFP/RFI
- Remember that IPv6 is not only routers
- A simple check-box in an RFX isn't enough
  - Tests, proof of concepts, limited launches, etc.
