Policy Proposal Name: IPv6 Address Allocation and Assignment Policy – removal of “interim” qualification

Author: Jordi Palet Martinez, Consulintel

Versión: 1.0

Submission Date: 12 April 2007

Current status: Discussion Phase

Suggested WG for Discussion and Publication: Policy Group

Proposal Type: Modification

Policy Term: Permanent

Policy Document to be Affected: Its current equivalent

Summary of Proposal:

This policy modification is a minor update to the introduction section of the IPv6 Address Allocation and Assignment Policy.

Draft Policy Text:

Text to be deleted from ripe-388:

(1.1. Overview)

This policy is considered to be an interim policy. It will be reviewed in the future, subject to greater experience in the administration of IPv6.

Rationale:

a. Arguments Supporting the Proposal

The policy suggest that it is an interim one, however it is not longer the case. It is clear that any policy is always subjected to changes; however, other policies don't have a similar text.

It may be considered as a negative “message” for IPv6 deployment, especially because the possible understanding as “not enough experience, this can be changed”, which is not a real situation.

b. Arguments Opposing the Proposal

None foreseen.
